EDGE UTOPIA™

EDGETAPER BLAZE UTOPIA™

Enhanced. Beautiful. Utopia.

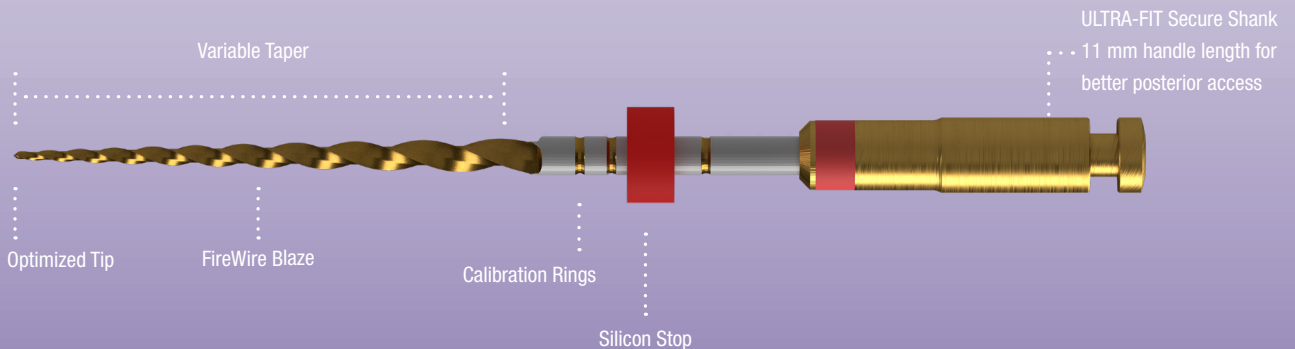

The Remarkable EdgeTaper Blaze Utopia™

The NEW EdgeTaper Blaze Utopia™ is an alternative to ProTaper Gold®, with more efficient, resilient blade, than EdgeTaper Platinum™. It can be used with the same technique as ProTaper Gold® and EdgeTaper Platinum™. It features our FireWire Blaze Heat-Treatment making it efficient, safe, and flexible. Plus, we added our new ultra secure, Ultra-Fit Handle and all EdgeUtopia™ files are provided in pre-sterilized blister packs.

FireWire Blaze

FireWire Blaze—Years to develop and worth every minute. We wanted to outdo our original FireWire and with FireWire Blaze, we believe we have! We know you will love the feel and flexibility as you negotiate the most challenging canals.

Pre-Sterilized

Tri-Shaped Cross Section

Available in 3 lengths: 21, 25 & 31 mm

EDGETAPER BLAZE UTOPIA™

Pre-Sterilized

Speed 300 to 400 rpm
Torque setting 250 to 510 g/cm

Simplified Technique Guide

- Use EdgeTaper Blaze Utopia™ in canals with a confirmed, reproducible glide path.
- Use EdgeTaper Blaze Utopia™ in a deliberate brushing motion on the out-stroke.
- Irrigate, recapitulate with a #10 file and re-irrigate after removing each rotary file.
- Frequently clean and inspect the flutes of the rotary file.
- Use SX to eliminate triangles of dentin when present.

Create straight line access to canal orifice.

1. NaOCl, 17% EDTA liquid or other viscous chelator should always be in the canal.
 2. Form a coronal glidepath using #10 & 15 hand instrument 2/3 the working length.
 - Alternatively, mechanized glidepath files may be used instead.
 3. In the presence of viscous chelator, take the S1 the length taken by the #15.
 4. Then take the S2 the length taken by the #15.
 5. Established working length in the presence of a viscous chelator by confirming the working length with an apex locator and at least #10 hand instrument.
 6. Form a glidepath using #10 & 15 hand instrument to the working length.
 7. In the presence of viscous chelator, take the S1 to the working length.
 8. Then take the S2 to the working length.
 9. Use F1 Finishing until working length is reached.
 10. Gauge the foramen with a #20 hand instrument. If the instrument is snug at length, the canal is shaped and ready to be obturated.
- If the #20 hand instrument is loose at length, proceed to the F2 and, when necessary the F3.
 - The EdgeTaper Blaze Utopia™ sequence is always the same regardless of the length, diameter or curvature of the canal.

*This technique is intended to be used as a guide only. Please see full IFU.

The NEW EdgeTaper Blaze Utopia™ features metallurgically enhanced capabilities. We are also excited to introduce our incredible FireWire Blaze NiTi with our new FireWire Blaze heat treated alloy along with our new Ultra-Fit handle. The EdgeTaper Blaze Utopia™ has been designed to be improved over our EdgeTaper Platinum™!

We Know You Will Be Impressed!

EDGETAPER BLAZE UTOPIA™

- Alternative to ProTaper Gold® and EdgeTaper Platinum™
- Available sizes: SX, S1, S2, F1, F2, F3
- Triangle-shaped cross-section
- Improved cutting efficiency
- Resilient to unwinding
- Non-cutting tip
- Reduced shank and handle length for increased posterior access
- Available lengths: 21, 25 & 31 mm
- FireWire Blaze technology
- Sterile Packaging
- ULTRA-FIT Secure Handle
 - Allows for real time apex locator readings
- Spectacular Gold Color Heat Treatment
- Pre-Sterilized
